

## Product Advisory

**Date:** February 28, 2022  
**Product:** MPF-C, MPF-CQ

Under the two finished good SKUs mentioned above, ATX previously offered alternative design styles, as pictured below. All variations of this connector remain functionally equivalent in terms of quality, specifications and the tools used. ATX relied on multiple manufacturing sources and this resulted in slight, but visible differences. Due to Covid supply chain impacts, we are no longer able to offer the style pictured on the left below.

The connector shown on the right will continue to be manufactured as it always has been. It can be identified by the tapered portion above the compression area, and the packaging will read “Made in Taiwan.” There will remain two size options: MPF-C for dual/tri shield cable, MPF-CQ for quad shield. No part number changes are necessary in your system.

ATX Part Number	Description
MPF-C	Non-blind F Compression Connector - Mini Dual/Tri Coaxial
MPF-CQ	Non-blind F Compression Connector - Mini Quad Coaxial

90° Compression Collar (EOL)

Tapered Compression Collar (Available)
